The acquisition opportunity

Metric	Observed baseline	Pilot hypothesis
Lead activation	368 / 5,000 = 7.36%	10%
Mean activation time	17.62 days	12 days, mix-adjusted
Blended acquisition cost	Rs 15,053 per activation	Rs 12,000 or less
Six-month churn	15.22%	12% after cohort maturity

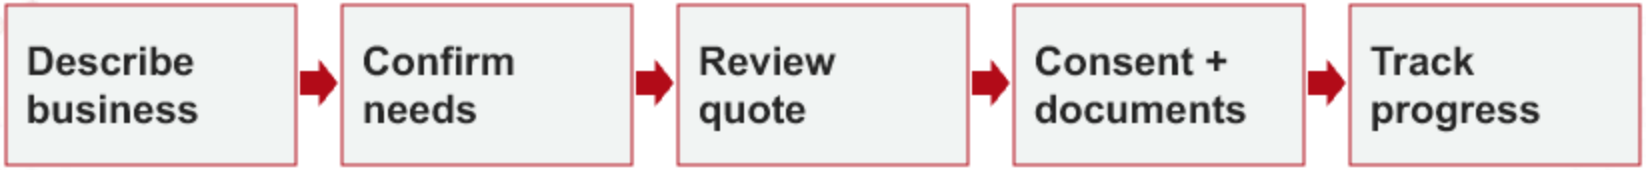

Synthetic data. Prices are starting estimates before illustrative tax unless stated.

Four segments, four starting playbooks

Segment	Illustrative services	Monthly / contract
Kirana, 1 counter	Fibre + POS / UPI WhatsApp adds Rs 999 with GST	Rs 1,598 / 12 months
Office, 5 users/devices	300 Mbps + email + security	Rs 2,619 / 12 months
6 outlets, 30 employees	Fibre + failover + CCTV/site 6 POS counters; SD-WAN optional	Rs 16,776 / 12 months
Manufacturer, 60 staff	ILL 20 + failover + firewall 8 machine-monitoring devices	Rs 11,690 / 12–24 months

Synthetic data. Prices are starting estimates before illustrative tax unless stated.

Customer journey and exception handling

Clear documentary checks proceed automatically in the synthetic demo.
Unclear evidence goes to review. Complex needs go to field or partner assistance.

Synthetic data. Prices are starting estimates before illustrative tax unless stated.

Value at a similar starting spend

Rs 2,600 existing median spend
Rs 2,619 office starter: +Rs 19 / month before tax

The starter includes fibre, five email seats and five protected devices.
The Rs 6,575 activated-bundle median reflects a different service mix.
This is a value comparison, not a like-for-like savings claim.

Illustrative 18% tax: Rs 471.42. Starting total: Rs 3,090.42. Confirm final tariff and tax.

Synthetic data. Prices are starting estimates before illustrative tax unless stated.

Document checks with an exception route

Tesseract runs through memory pipes on a derived image.
Deskew and pale/red watermark suppression improve readability.
Registry, address, name and expiry checks produce explicit decisions.

A conservative fast path requires four consistent documents.
Corrections, missing fields and mismatches remain in review.
Customer tokens cannot call privileged operator actions.

Synthetic data. Prices are starting estimates before illustrative tax unless stated.

Competitive landscape and our position

Provider / option	Publicly documented offering	Implication for our prototype
JioBusiness	Business internet; broader cloud, security, IoT and apps	Existing broad competitor; compare actual onboarding in pilot
Airtel Business	Connectivity, SD-WAN, cloud, security and IoT	Broad portfolio and assisted evaluation; not a greenfield market
Local resellers / ISPs	Case describes multiple vendors and local resellers	Existing relationship matters; service varies by partner
Udyam Digital	Rules-based quote, local OCR, assisted exceptions	Proposed journey; no proof of superior pricing or activation

Synthetic data. Prices are starting estimates before illustrative tax unless stated.

Risks and mitigations before a pilot

Risk	Current mitigation	Remaining work
Wrong AI requirements	User confirmation + server rules	Larger multilingual evaluation
OCR / false clearance	Conservative checks + exceptions	Independent document validation
Unauthorized actions	Separate operator secret	Accounts, roles, secure sessions
Privacy or data breach	Consent + minimisation + deletion	Encryption, grievance and incident ops
Price / installation promise	Range + tax assumptions + estimates	Approved tariffs and coverage APIs

Synthetic data. Prices are starting estimates before illustrative tax unless stated.
